EDUCATION

GOVERNMENT COLLEGE OF ENGINEERING

B.E IN COMPUTER SCIENCE
Sep 2022 - till | Trichy, TamilNadu
location CGPA : 7.53

KSR POLYTECHNIC COLLEGE

DIPLOM IN COMPUTER SCIENCE
Aug 2019 - Jul 2022 | Tiruchengode,
TamilNadu
Percentage : 94 / 100

MDV HR SEC SCHOOL

Grad. Mar 2019 | Tiruchengode,
TamilNadu
Percentage : 56 / 100

PROJECTS

FAST PIZZA [GitHub](#) | [Link](#)

REACTJS | REACT-ROUTER | REDUX | TAILWINDCSS

- Built a responsive single-page pizza ordering app using React.js. Users can browse, customize, and add pizzas to the cart, with the ability to **change sizes directly within the cart** for a seamless ordering experience.
- **State management with Redux:** Ensures centralized and predictable state management for a smooth user experience.
React Router for navigation: Facilitates seamless page transitions between menu, cart, and checkout.
Interactive form for order delivery: Utilizes React forms to capture user details and generate the billing page automatically
- Front end - Wrote and reviewed code for React using Backbone, style with Tailwind css

MAPTY [GitHub](#) | [Link](#)

HTML | CSS | JAVASCRIPT

- Leverages Leaflet to display an interactive map for visualizing running routes. Tracks and displays running distance in kilometers alongside markers marking start and end points.
- While the concept of object-oriented programming (OOP) is applicable to various aspects of web development, it's not directly relevant to creating a map using the Leaflet library. Leaflet provides pre-built classes and functions for creating and manipulating maps, markers, and other map elements. While these elements can be considered "objects" in the broader sense, they don't necessarily require you to implement custom constructors or classes yourself.

BANKIST [GitHub](#) | [Link](#)

HTML | SASS | JAVASCRIPT

- Bankist webstie is frontend money transfer website to user to another user help of array. Enables users to simulate and apply for loans with interactive frontend forms and calculations.
- Users manage their account balances stored in an array, leveraging slice and join functions to facilitate calculations and data manipulation.
